

# RF Reconnaissance Form – Target: \_\_\_\_\_

Base Frequency:

Modulation:

Data Rate:

Bandwidth:

Deviation (FSK) or Power Ramping (ASK) settings:

Fixed or Variable-length Packets:

Len/MaxLen:

Target Device “Address” (if applicable):

Preamble and Sync Word settings:

CRC16 (y/n):

What idiosyncrasies?

Forward Error Correction (y/n):

Details (convolutional/reed-soloman/other, how and what):

Manchester Encoding?      Implementational Details:

Data Whitening?      pattern and algorithm:

# RF Reconnaissance Form – Target: \_\_\_\_\_

FHSS Channel Hopping? (if not, skip this page)  
**FAST** (<1byte per hop) or **SLOW** (>1byte per hop)?

Is Hopping Pattern specific to Node or Cell?

How many channels: \_\_\_\_\_ Channel spacing: \_\_\_\_\_

Channel Dwell Time: \_\_\_\_\_

Sub-Timeslots and Usage: \_\_\_\_\_

Synchronization Algorithm: \_\_\_\_\_

Hopping Sequence Generator Algorithm: \_\_\_\_\_

**RF Reconnaissance Form – Target:** \_\_\_\_\_

Protocol Specifics (what do sync beacons look like, what bytes indicate what things, etc...)  
or anything else important to speak with this device/network:
